

8. (Amended) The specific binding protein of claim 7 wherein at least one [blank] Xaa is an amino acid with an aromatic ring.
17. (Amended) A recombinant specific binding molecule which specifically binds to the defined epitope bound by the antibody of claim 16.
23. (Amended) A recombinant specific binding molecule which specifically binds to the defined epitope bound by the antibody of claim 22.
27. (Amended) A specific binding protein which is raised to a multiply antigenic peptide comprising multiple copies of an isolated and purified peptide which comprises a leucine positioned two [peptide bonds] amino acids toward the amino terminus [away] from a tyrosine-arginine pair.
28. (Amended) The specific binding protein of claim 27 [which is raised to a multiply antigenic peptide which comprises multiple copies of the isolated and purified peptide comprising a leucine positioned two peptide bonds away from a tyrosine-arginine pair, and] wherein the peptide from which the specific binding protein is raised consists of from 5 to 71 amino acids.
30. (Amended) A recombinant specific binding molecule which specifically binds to the defined epitope bound by the binding protein of claim 29.
34. (Amended) A specific binding protein which is raised to a recombinant plant virus particle comprising at least one copy of an isolated and purified peptide comprising a leucine positioned two [peptide bonds] amino acids toward the amino terminus [away] from a tyrosine-arginine pair.
35. (Amended) The specific binding protein of claim 34 [which is raised to the recombinant plant virus particle, wherein the particle comprises at least one copy
